## – PRESS RELEASE –

### “Outrigger Davit”

March, 2011

Eliminate the need to lug frame scaffolding to the rooftop!  
Leave your beam stands at home!

WINSAFE's "Outrigger Davit" provides quick, easy clearance over tall parapets of up to 8 feet in height, while keeping the outrigger beam (and more importantly the counterweights) at a safer and more manageable rooftop level.

Integrating seamlessly with WINSAFE's modular outrigger beam system, the hinged vertical mast is easily tilted and pinned into position, providing up to 4 feet of reach and 1,000 lbs load capacity with a minimum 4:1 safety factor.

Lightweight and durable aluminum and galvanized steel construction ensures years of trouble-free operation, while the modular design offers superb ease of handling.
