

# WINSAFE

ROOFTOP RIGGING & MATERIAL HANDLING SYSTEMS

## HOISTING BEAM

WINSAFE's Hoisting Beam is a unique lifting solution that can be used to raise and lower materials or as man-rated lift.

- Your own powered hoist is mounted to the hoist stand (1,000 lbs capacity typical).
- The integrated wire winder manages excess wire rope as the load is raised and lowered.
- The assembly makes use of WINSAFE's standard modular outrigger components (beam sections, splice, front beam dolly).
- Wire rope travels on sheaves for smooth, trouble free operation.
- Provides up to 4' of roof clearance.
- Up to 4' of reach can be achieved.
- Pivoting dual 10" pneumatic (or optional semi-pneumatic) locking wheels with bearings roll easily and spread the load over a larger surface.
- Counterweight holders for flame cut or saddle style weights.
